

## **How does a quantum object gravitate?**

Prof. Dr. Markus Aspelmeyer

*Quantum Optics, Quantum Nanophysics and Quantum Information, Faculty of  
Physics, University of Vienna*

No experiment today provides evidence that gravity requires a quantum description. The growing ability to achieve quantum optical control over massive solid-state objects may change that situation – by enabling experiments that directly probe the phenomenology of quantum states of gravitational source masses. I will review the current status in the lab and the challenges to be overcome for future experiments.
