

Dirk Dubbers, Hans-Jürgen Stöckmann

Quantum Physics: The Bottom-Up Approach

From the Simple Two-Level System
to Irreducible Representations

266 pages, with 60 figures

© Springer-Verlag Berlin Heidelberg 2013

PART I PROLOGUE

1 Recollections from Elementary Quantum Physics

PART II TWO-STATE QUANTUM SYSTEMS

2 A Most Simple Two-Level System

3 Quantum Theory in a Nutshell

4 Experiments on Spin Precession

5 General Solution for the Two-Level System

6 Other Tools and Concepts

7 Diaboloic Points, Geometric Phases, and Quantum Chaos

8 The Coupling of Particles

9 “Spooky Action at a Distance”

10 The Heisenberg Equation of Motion

PART III QUANTUM PHYSICS AT WORK

11 Spin Resonance

12 Two-State Systems in Atomic and Molecular Physics

13 Two-State Systems in Condensed Matter

14 Two-State Systems in Nuclear and Particle Physics

15 Quantum Informatics

PART IV MULTILEVEL SYSTEMS AND TENSOR OPERATORS

16 Rotations and Angular Momentum

17 Irreducible Tensors

18 Electromagnetic Multipole Interactions

19 The Generalized Spin Precession Equation

20 Reorientation in Static Electromagnetic Fields

21 Reorientation in Time Dependent Fields

22 Relaxation and Decoherence
